"Analysis on Manifolds" is a leisurely (more than twice as long as Spivak) and well-motivated exposition of much of the same topics as "Calculus on Manifolds" and even a few advanced topics like de Rham groups and manifolds in spaces other than  $\mathbb{R}^n$  and uses figures throughout to aid in explaining geometric concepts.

## **Analysis On Manifolds (Advanced Books Classics): James R**

Fortunately, Munkres is a very thorough expositor -- his proofs rarely have 't's uncrossed or 'i's undotted -- and that makes his texts ideal for self-study at the undergrad level. The only downside to the book is that the exercises are not challenging.

The finer is the topology on a set, the smaller (at least, not larger) is the closure of any its subset. Indeed, a finer topology has more closed sets, so the intersection of all closed sets containing a given subset is, in general, smaller in a finer topology than in a coarser topology.
