A chromogenic print, also known as a silver halide print, or a dye coupler print, is a photographic print made from a color negative, transparency, or digital image, and developed using a chromogenic process. They are composed of three layers of gelatin, each containing an emulsion of silver halide, which is used as a light-sensitive material, and a different dye coupler of subtractive color ...

Multiplication: Spin, Solve and Color by The Moffatt Girls

Understanding Color & Light. Light is the single basic ingredient required to create photographs. Without light, pictures don't exist. Digital photography is the process of transferring light energy, carried by photons, into digital information, which can be processed and displayed by computers and cameras in the form of digital images.
