Buoyancy - Buoyancy, Density, Mass - PhET

Describe how the concept of density relates to an object's mass and volume. Explain how objects of similar mass can have differing volume, and how objects of similar volume can have differing mass. Explain why changing an object's mass or volume does not affect its density (ie, understand density as an intensive property).

Density - Density, Mass, Volume - PhET

Increasing the size of an object increases / decreases / doesn't change the object's density (circle) 2. An object with a density of .67 kg/L would float 1/3 , 1/2 , 2/3 under water.

density and buoyancy. Take a guess at what these terms mean. You may have heard them before. Here are a couple of hints: Density helps explain why a piece of steel sinks in water and a beach ball floats. And, buoyancy explains why a huge piece of steel in the shape of a ship floats! 1. How does the density of a block of steel compare
