Nonlinear Model Library. This nonlinear model library is a collection of process models consisting of differential and algebraic equations. Applications include processes from life sciences, energy research, electric vehicles, distillation, and benchmarking applications.

Systems Simulation: The Shortest Route to Applications. This site features information about discrete event system modeling and simulation. It includes discussions on descriptive simulation modeling, programming commands, techniques for sensitivity estimation, optimization and goal-seeking by simulation, and what-if analysis.

Overview. The most basic type of integral equation is called a Fredholm equation of the first type,  $\int_a^b K(x,y) \phi(y) dy = f(x)$ . The notation follows Arfken. Here  $\phi$  is an unknown function,  $f$  is a known function, and  $K$  is another known function of two variables, often called the kernel function. Note that the limits of integration are constant: this is what characterizes a Fredholm equation.

Ship gun fire-control systems (GFCS) are fire-control systems to enable remote and automatic targeting of guns against surface ships, aircraft, and shore targets, with either optical or radar sighting. Most US ships that are destroyers or larger (but not destroyer escorts or escort carriers) employed GFCS for 5-inch and larger guns, up to battleships, such as the USS Iowa.
