Nonlinear resonances are discussed in detail, as well as methods for shaft stability and various theoretical derivations and computational methods for analyzing rotors to determine and correct vibrations. This edition also includes case studies and problems.

â€¢ non-linear elastic and energy dissipation properties of sub-systems such as contact seals, rubber, polymer elements, elements with clearances such as partially worn ball bearings etc... TWO STRATEGIES There are essentially two strategies for vibration analysis of non-linear rotor-bearing-foundation systems that contain non-linear sub-systems. 1.

used with the HBM to reduce the system nonlinear differential equations to linear algebraic equations involving only the nonlinear coordinates. A recently developed convolution approach by the present author for the non-linear transient analysis was carefully tested against direct integration techniques and proved more robust and efficient.
