If reproductive biology and early life history information from captive fishes represent that of wild populations, then the data obtained during this study are relevant to development and implementation of conservation and management plans for these closely related darter species.

### **Captive Propagation, Reproductive Biology, and Early Life**

Reproductive biology and early development of two species of sleepers, *Eleotris acanthopoma* Bleeker, 1853, and *E. fusca* (Forster, 1801), were investigated in streams on Okinawa Island in southern Japan.

study reports the reproductive biology and early establishment of *Pinus elliottii* Engelm. var. *elliottii*, describing its invasive properties in a protected natural area of the Brazilian coastal sandy plains.

### **Reproductive biology and early establishment of Pinus**

The reproductive biology of the African pike, *Hepsetus odoe*, was studied over a four-year period in the Okavango Delta, Botswana. Spawning takes place between August and May in different parts of the Delta.

### **The reproductive biology and early development of the**

Reproductive biology and early life history data are critical for the conservation and management of rare fishes. During 2008–2012 a captive propagation study was conducted on the Diamond Darter, *Crystallaria cincotta*, a rare species with a single extant population in the lower Elk River, West Virginia.
