Unlike a helicopter rotor, the lift acts mainly sideways on the boomerang instead of upward. This aerodynamic force imbalance is noted in the diagram. If the boomerang were not spinning, the unbalanced push at the top would make it tip.

Returning Boomerangs in Flight - 4Physics Science Store

The ends of the boomerang must then form a semicircular and its two ends should possess a rounded create. To soften the plywood of the boomerang, place each leads to the steam of a hot pan or coffee pot thereafter considerately bend it upwards and outwards like a flap before letting it dry.
