

robots in space a pdf

A robot is a machine—especially one programmable by a computer—capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within. Robots may be constructed to take on human form but most robots are machines designed to perform a task with no regard to how they look.

History Making Mobile Robots - David Buckley

“The Florida Space Coast is a unique area with several rapidly expanding national defense industries and a very prevalent military presence. By forming a Space Coast Chapter, it will provide networking and professional development opportunities to promote the role of women in national defense and security, to support military service members, and to encourage partnerships within the local ...

On January 1st, 2018, I made predictions (here) about self driving cars, Artificial Intelligence and machine learning, and about progress in the space industry. Those predictions had dates attached to them for 32 years up through January 1st, 2050. So, today, January 1st, 2019, is my first annual self appraisal of how well I did.
