Design of gating, feeding system and simulation was performed in Auto-CAST X1 software, which is shown as a diagrammatic representation (). First, wear plate part was made in Pro-E modeling software and then it was imported into Auto-CAST X1 casting simulation Software for designing of gating and feeding system.

Monte Carlo methods (or Monte Carlo experiments) are a broad class of computational algorithms that rely on repeated random sampling to obtain numerical results. Their essential idea is using randomness to solve problems that might be deterministic in principle. They are often used in physical and mathematical problems and are most useful when it is difficult or impossible to use other approaches.

Monte Carlo method - Wikipedia

A simulation is an approximate imitation of the operation of a process or system; the act of simulating first requires a model is developed. This model is a well-defined description of the simulated subject, and represents its key characteristics, such as its behaviour, functions and abstract or physical properties.
